COP 4655

Step one to three was to simply drag and rename each view. Along with that I would stack the view then embed it.

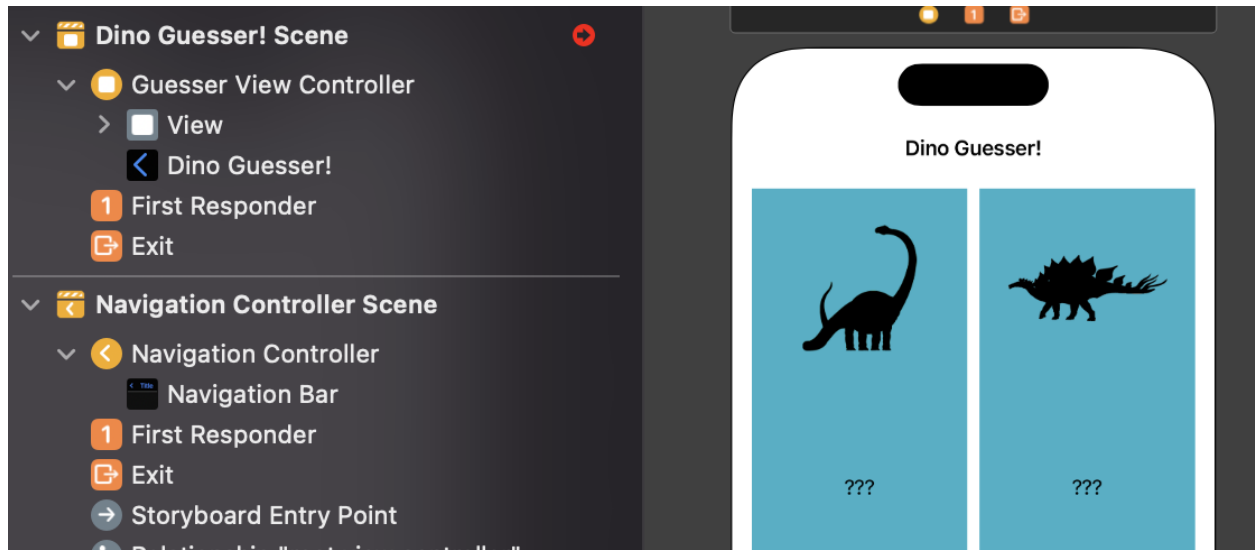

Step four we divide the four views into 2 separate horizontal stacks. (1&3)(2&4)

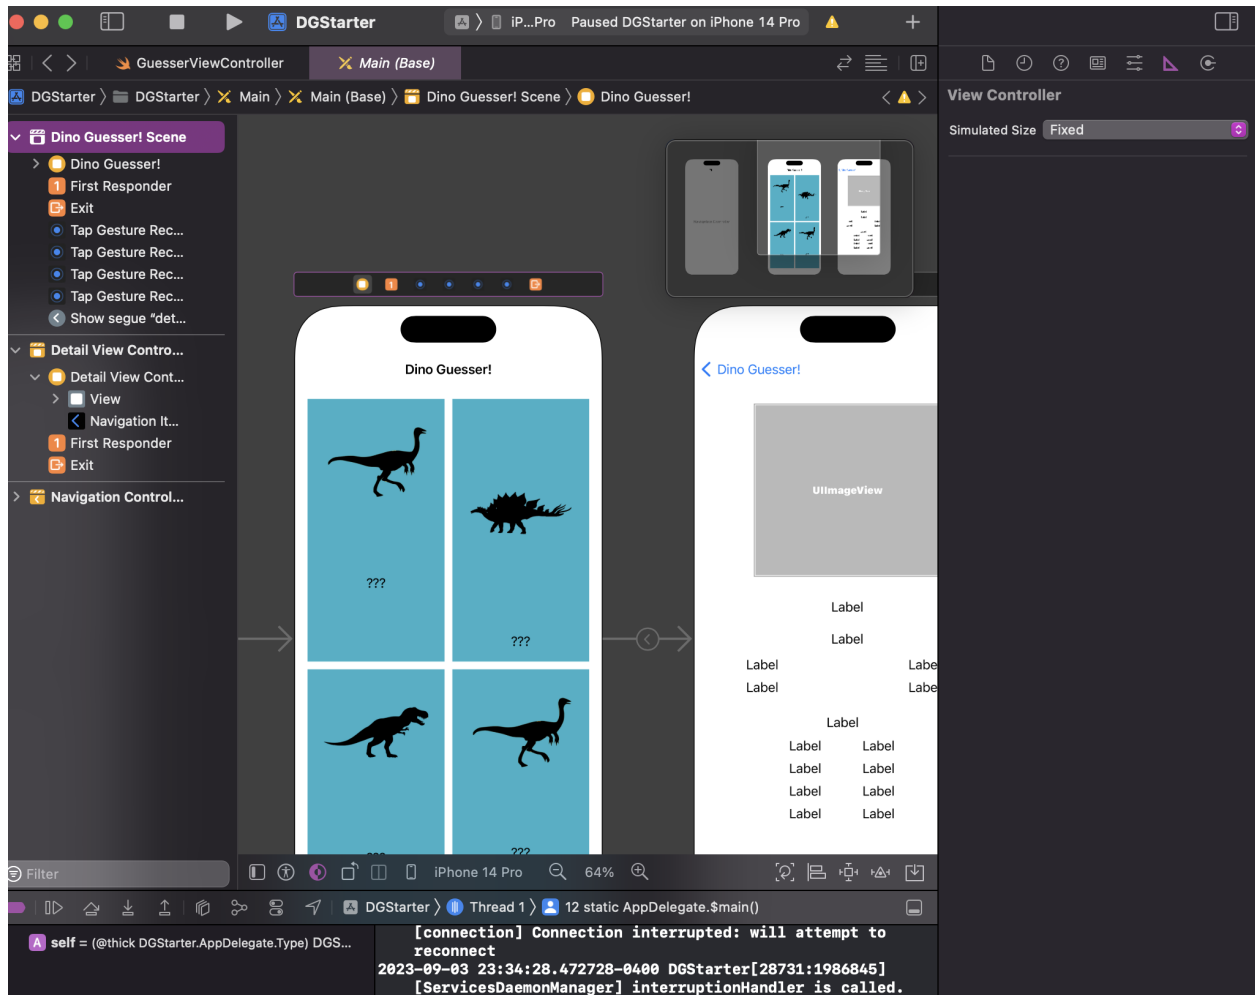

Step 5 was to stack both horizontal stacks and embed them again at 16 pt.

There we ran the app. In a rotation to see if we compress the image to show the labels when flipped to the side.

Step 6 I set up the Nav Controller with the title Dino Guesser!

Step 7 we create the new DetailedViewController file. Along with the Nav. detailSegue

Step 8&9 i got stump stumped because when trying to add the appropriate codes it did not seem to correlate when I would try to incorporate then im.
